

GUIDED BY LIGHT

ATLAS

TIME OPTIMIZATION

Applied to different processes:

- Picking
- Replenishment
- Reception
- Consolidation
- Sorting
- Reverse logistics

SIMPLICITY, RELIABILITY AND EFFICIENCY

- Simple and intuitive system: No prior knowledge of the product or locations is required.
- High performance of warehouse personnel, including new hires or replacements.
- Totally hands-free operations. Order sheets, PDAs, etc... are eliminated. All work is done through the control device of each section.
- Elimination of selection errors and subsequent verifications..

ATLAS LIGHT-GUIDED SYSTEM:

The ATOX "ATLAS" light guided system is the optimal solution for high-performance and error-free light-guided picking and putting operations.

"ATLAS" works by taking into account the physical layout of the installation, always indicating the optimal route for the picker.

"ATLAS" uses LED light lines installed on the front of the racks, which, paired with a control device per section, can be programmed in four independent colors and different product lengths, allowing the simultaneous work of several pickers in the same work area.

Integration is no longer a problem: ATLAS is 100% compatible with any ERP/WMS/SGA.

GREAT VERSATILITY

- Maximum flexibility: software-based adaptation of product locations.
- Integration with other ATOX automations, such as intelligent roller systems.

ZERO CLAIMS IN ERROR

HIGH PRODUCTIVITY/ EFFICIENCY

ROI LESS THAN ONE YEAR
